# R PROGRAMMING BASICS: EXPLOLATORY DATA ANALY-SIS

## 1Defining the problem

The research problem in this case is to find out individuals that are likely to click on a blog advert based on their characteristics which include; Age Daily Time spent on site Area of residence Internet Usage Gender Country of residence

### 2. Metric of Success

The metric success of this project is to identify clients likely to click on the ad after performing intense data analysis (EDA).

#### 3.Data Relevance

The data provided by the client is from the performance of a previous blog advert on the same website. The columns are as follows: \* Daily Time Spent on the site-Integer \* Age of the individual browsing-Integer \* Area of residence Internet Usage \* Gender of the browsing individual \* Country of Residence

# 4. Understanding the Context

A Kenyan entrepreneur has created an online cryptography course and would want to advertise it on her blog. She currently targets audiences originating from various countries. In the past, she ran ads to advertise a related course on the same blog and collected data in the process. She would now like to employ your services as a Data Science Consultant to help her identify which individuals are most likely to click on her ads. To achieve this we will perform exploratory data analysis on a dataset using R programming language.

## 5. Experimental Design

- .Data Loading
- .Data cleaning for missing values and outliers
- .Exploratory Data Analysis
- .Conclusion-Detecting the trend in behaviour.

# 11.Observations

The data was clean and complete i.e. contained no outliers and no missing values.

The modal age was 31 years and the range was between 19 and 61.

Most of the individuals spent around 62.26 Minutes on the site. The time ranged from 32.60 minutes to 91.43.

The Average Area Income of the individuals was 55,000 which ranged between 13,996.5 and 79,484.80

The Daily Internet Usage had an average of 180 Mbs and ranged between 104.78 and 269.96

The most frequent cities were; Lake Faith and West Ryan

The most frequent Countries were; Fiji and Chad.

The number of females was more than that of male counterparts.

The number of individuals who clicked on the advert and those who didn't were equal at 500.

There are negative correlations between the following variables 1.Area Income and Daily Time Spent on Site 2.gender and Daily Time Spent on Site 3.Clicking on the Advert and Daily Time Spent on Site. 4.Income and Age 5.Daily Internet Usage and Age 6.gender and Age 7.Income and Age 8.Income and Clicking on the Advert 9.Daily Internet usage and Clicking on the advert. 10.gender and Clicking on the Advert

There were positive Correlations between the following variables: 1.Age and Clicking on the advert 2.gender and Daily Internet Usage 3.gender and Income 4.Daily Time Spent on Site and Daily Internet Usage. 5.Income and Daily Time Spent on Site 6.Income and Daily Internet Usage 7.Income and gender 8.Age and Clicking on the Advert.

The heatmaps showed a higher correlation between

# 12. Conclusuion

The dataset was appropriate. it contained no missing values and minimal outliers amongst the varaibles Both univariate and Bivariate analysis revealed that the dataset is collinear, hence it can be analysed better by use of a classification algorithms.
